SUMMARY

AI software engineer with 10 years shipping production applications in Python, TypeScript, React, Node.js, and Java. I build LLM agent workflows with guardrails and human review, the APIs and services behind them, and the web and mobile apps people use. My background includes regulated financial systems at Wells Fargo and a JCPenney platform serving millions of users. I use Claude Code, Codex, and Cursor every day, and I mentor junior engineers.

SKILLS

TypeScript, JavaScript, Python, Java, SQL | LLM APIs, agent pipelines, MCP, prompt design | React, Next.js, React Native, Node.js, Django, Spring Boot | PostgreSQL, REST, GraphQL | AWS, Azure, Docker, GitHub Actions

EXPERIENCE

AI Software Engineer — Lotnivo, Remote
March 2022 - Present

- Cut manual review time by roughly 70% with a multi-stage LLM agent pipeline that screens hundreds of applications a week, routes each step to a model tier by cost and task, and holds every output for human approval.
- Designed REST and GraphQL APIs and backend services in Node.js/TypeScript and Python/Django over PostgreSQL for 5+ client engagements.
- Shipped React and Next.js web apps and React Native mobile apps from design to production, backed by reusable component libraries that sped up new screens.
- Moved tightly coupled systems onto independently deployable AWS services with Docker and GitHub Actions, which cut deploy time from hours to minutes and production incidents by roughly 40%.
- Use Claude Code, Codex, and Cursor daily for implementation, refactoring, and tests across client codebases.
- Raised test coverage above 80% by setting testing and code review standards across contributors, and mentor junior developers through pairing.

Tech & tools: TypeScript, Node.js, Python, Django, React, Next.js, React Native, PostgreSQL, GraphQL, LLM APIs, AWS, Azure, Docker, GitHub Actions, Jest, pytest, Playwright, Jira, Claude Code, Codex, Cursor

Software Engineer — Wells Fargo, Charlotte, NC
May 2019 - June 2020

- Built and maintained backend REST services in Java with Spring Boot for internal financial applications.
- Connected React front ends to those services through a Node.js and Express middleware layer that handled sessions, validation, and errors in one place.
- Expanded the usable audience by over 25% with WCAG/ARIA accessibility and internationalization, in a regulated codebase reviewed with security and compliance teams.

Tech & tools: Java, Spring Boot, React, Redux, JavaScript, Node.js, Express, REST APIs, Jest, Jira, Git

Software Engineer — JCPenney, Plano, TX
June 2017 - May 2019

- Built React and Redux features for a retail loyalty platform serving millions of users, and improved its load times.
- Refactored a legacy monolith into a modular, component-driven architecture that was easier to scale and maintain.
- Owned code quality through code reviews and production debugging under peak shopping traffic.

Tech & tools: React, Redux, JavaScript, HTML, CSS, REST APIs, Jira, Git

OPEN SOURCE & HACKATHONS

Think-Wide — AI Agent Hackathon, September 2026
github.com/freebatteryfactory/think-wide-hackathon

- MCP servers and a React workbench that give coding agents verified project context before they act, cutting hallucinated code references.
- Three developers and several AI agents merged 19 pull requests in one day, all behind 591 passing tests.

PA Expunger (PAX) — Code for Philly and Philadelphia Lawyers for Social Equity
github.com/Philadelphia-Lawyers-for-Social-Equity/PA_Expunger

- Open source Python/Django and React app that turns county docket sheets into Pennsylvania expungement petitions, replacing manual drafting for the attorneys who file them.
- Contributed to deploying it for PLSE attorneys with Docker Compose, pytest, and a Kubernetes pipeline.

EDUCATION

B.S. Software Engineering — Western Governors University (in progress) | **Full-Stack Web** — DevMountain, 2017
